

	Spot Check  Level 1	Regular Pentest  Level 2	Advanced Pentest  Level 3
	Initial assessment Initial assessment of the security level in the context of a sample.	For most applications Deep investigation to identify the most common risks and vulnerabilities for web applications.	High level of security Extended, deeper investigation with more test cases, e.g. for applications that process business-critical operations and sensitive data.
General			
Attacker level	Simulation of an attacker using simple techniques to identify easy-to-find/exploitable vulnerabilities (low-hanging fruits).	Simulation of a resolute attacker , who uses current attack techniques from the hacker scene.	Simulation of a resolute and skilled attacker using current attack techniques from the hacking scene and targeting the web application .
Test cases	Sample examination	Test cases that take into account the OWASP Top 10 vulnerabilities and thus contain the most frequently exploited security risks for web applications.	Test cases that consider the OWASP Top 10 vulnerabilities (see Regular Pentest) + additional, selected test cases/requirements from the OWASP Application Security Verification Standard (ASVS)
Test method	Random automated tests + manual penetration tests	Automated tests + manual penetration tests , which are usually not found by automated tools.	Automated tests + Deeper manual penetration tests , which are usually not found by automated tools.
Test content & report			
Portscans (web server)	Basic portscan (Top 100 TCP)	Advanced portscan (Top 1000 TCP/ Top 10 UDP)	Complete portscan (all 65535 TCP/ Top 10 UDP)

WEB APPLICATION SECURITY – ÜBERSICHTSTABELLE PENETRATIONSTESTS

		Basic vulnerability scan	Complete vulnerability scan
Vulnerability scan (web server)			
SSL/TLS verification/scans (web server)	✓	✓	✓
Provision of technical attachments, e.g. the raw results of the port & vulnerability scans			✓
Optional: Overview of all test cases in the report, also positive ones			✓
<u>Other, prices and test periods</u>			
Re-testing of the findings after remediation	Not included	Up to 5* (within 3 months)	Unlimited* (within 3 months)
Test time frame	≤ 3 days	≥ 5 days	≥ 10 days
Price	from 3.900 €	from 7.900 €	from 14.900 €

* Only vulnerabilities rated as critical or high
